FLBT7200BL	16432	Square steel box with BLACK stainless steel trapdoor cover	1	1

Ships with 20A receptacle (NOT installed)

Arlington's **Pop-up COVER/BOX KITS** give you options for installing a device in a floor or countertop.

The device installs from the front. There's no need to dismantle the hinge mechanism.

The kit includes a 20A receptacle that you can use – OR replace with one of your own.

We made it easier than ever to install the receptacle – from the front! Just remove the white cover plate, install the receptacle and replace the cover plate. It's that simple!

The gasketed, stainless steel or black stainless TRAPDOOR COVERS look great! They close flush with the floor or countertop, preventing damage to the device in the box – and minimizing trip hazards in a floor installation.

Easy, secure installation
The spring clip holds box securely against the surface when the screws are tightened.

- Fits surfaces up to 1-1/2" thick
- Easy 'No Glue' installation
- Uses standard rectangular receptacle, and GFCI, and GFCI/combination receptacles
- Passes scrub water test
- Listed as a floor box. For installation in countertops check with your local inspection authority for approval.
- Ingress Protection
