Steel tape – 60m x 1/3cm x .15cm	31-129	31-038

The preferred choice in fish tapes

Stainless Steel

The latest fish tape innovation. It won't rust or corrode, so it's perfect for jobs in damp or wet conditions. Stainless steel is easy to rewind and provides maximum pulling strength.

Blued Steel

The industry standard for strength and durability. Constructed of highest-grade, tempered spring-steel, it offers rust resistance and improved toughness. A flexible, non-curling design makes it easy to handle and reduces labor.

Fiberglass

The specially designed fish tape for safe installation. Featuring a non-conductive fiberglass core with an outer nylon coating, it's perfect in office retrofit environments. Reduces jamming, friction and abrasion and provides twice the pull-out strength of other brands.

Gold-Fish™ Multi-Stranded Steel

The choice fish tape for navigating multi-bend applications. Made of multi-stranded steel wire, it has superior flexibility so it won't jam or back-up. Features a 500 lb. working strength and a bright brass finish that resists corrosion.
