

Product End of Life Instructions

HDPM6000B Busway Metering Module

Potential disassembly risks

⚠ CAUTION

HAZARD OF PARTS WITH SHARP EDGES

Apply appropriate personal protective equipment (PPE) during disassembly.
Failure to follow these instructions can result in injury.

Product description

Manufacturer identification	Schneider Electric Industries SAS
Brand name	Schneider Electric
Product function	This is an integrated solution for monitoring multi-circuits and power quality by using a single meter. The meter is designed to be modular, directly connectable on a busway tap-off, with an architecture meeting data center requirements in an all-in-one solution. Allow monitoring of loads up to 4000A with utility grade accuracy on all branch channels. This unit is mounted inside a Tap Can and allow measurement of 8 branch circuits. Allow measurement of energy, power demand, instantaneous power, current, harmonic and more - in total or per phases. Devices can be connected in daisy-chain thanks to CAT5 or CAT6 straight-through Ethernet cable. The HDPM6000 series can also maintain multiple, concurrent sessions with EPMS, DCIM or BMS applications via the Modbus, SNMP and BACnet IP protocols. Certified for IEC61326-1 and EN61326-1:2020, related to Industrial Electromagnetic Environment. The system PowerLogic HDPM6000 can help you identify increased harmonics in the rack servers to detect a potential disruption. Thanks to daisy-chain, it is possible to connect additional modules if the head unit capacity isn't exceeded.

Total representative product mass	353 g
Representative product dimensions	69.3mm x 145.54mm x 69.34mm
Date of information release	10/27/2025

Additional information

Legal information	This product family is in the scope of European Union directive 2012/19/EU on Waste Electrical and Electronic Equipment (WEEE). The product family must be disposed according to the legislation of the country. This document is intended for use by end of life recyclers or treatment facilities. It provides the basic information to assure an appropriate end of life treatment for the components and materials of the product.
Recyclability potential	56% The recyclability rate was calculated from the recycling rates of each material making up the product based on REEECY [®] LAB tool developed by Ecosystem, for components/materials not covered by the tool, data from the EIME database and the related PSR was taken. If no data was found a conservative assumption was used (0% recyclability).
